

Beyond SSL

Value-added services included with VeriSign SSL Certificates

VeriSign SSL Certificates offer SSL protection and more—all in a single solution. Enjoy exclusive trust features to help you extend a secure experience beyond online transactions, and drive traffic to your website.

Vulnerability assessment — protect your website

Vulnerability assessment is an easy way to identify the most critical vulnerabilities on your website that hackers most commonly exploit:

- Checks for SQL Injection, Cross Site Scripting and other vulnerabilities
- Weekly scan on public-facing web pages, web-based applications, server software and network ports for the entry points used most frequently for attack
- Easy-to-read, actionable report with clear action items and business risk analysis
- Included with Premium SSL Certificates and Extended Validation SSL Certificates

Malware scan — protect your customers

Malware scan helps protect you from being blacklisted by search engines and reduce risk of propagating viruses to customers' systems:

- Daily review helps ensure regular monitoring for malicious code on your system
- Immediate alert by email warns of malware infection
- List of infected pages and problems help administrators pinpoint and remove malware

Seal-in-Search™ — get more search engine traffic

Seal-in-Search helps you get noticed in search results and increase traffic to your site:

- The VeriSign seal* is displayed within search engine results next to links to VeriSign trusted sites
- Brings the value of the VeriSign seal to search results, so web users are able to trust your link before they click
- Seen by consumers who use browsers enabled with a free plug-in, as well as on partner shopping sites and product review pages
