VeriSign® Global Consulting Services: RFID Consulting for Asset Management

VeriSign enables and protects more than 30-billion global interactions every day and offers extensive wireless communication solutions so the world can communicate, conduct commerce, and access the latest content anywhere, any time, across any network and with any device.

Our suite of RFID asset management offerings provide automated tracking and visibility of assets for businesses, improving asset utilization with state-of-the-art RFID technology.

+ The Issue

Today companies have difficulty tracking their assets, including location, condition, maintenance, and utilization. Typically a manual system is used for tracking purposes and is largely ineffective. Lack of optimized utilization and loss of assets negatively affects the bottom line.

+ The Solution

RFID asset management offerings provide the most seamless and technologically advanced approach for automating asset tracking data. RFID Consulting for Asset Management gives you control of your assets and provides an easy-to-use and functional system with the ability to more easily capture and report asset data.

Improve Asset Utilization and Reduce Capital Costs by providing up-to-date information on asset location, condition, maintenance records, safety regulation data, and accountability information. Accurately record all assets by automatically reading RFID tags placed on assets to provide real-time tracking and employee check-out records.

A Flexible Mobile Solution Architecture is important to maximize your existing and future technological and operational investments. The RFID asset management solutions interface with your existing enterprise back-end systems to receive and send data about your assets, such as equipment manuals, maintenance records, and much more.
