

DATA SHEET

SECURE SITE ISP PROGRAM LEVELS

The VeriSign Secure Site ISP Program is dedicated to meeting the needs of our ISP and Web hosting partners—over 15,000 strong, including all the leading providers. Join the program at one of the following levels:

Partners

Access VeriSign Customer Support and online sales and marketing resources, along with automated enrollment and account management.

Premier Partners

Industry leaders engaged in market development, as well as promoting VeriSign solutions to their customers in the United States, are assigned dedicated account resources.

Gold Partners

Industry-leading firms interested in marketing VeriSign products and services worldwide receive priority customer and partner support.

+ Offer the Leading Internet Trust Solution

VeriSign, the leading provider of Internet trust services and one of the most trusted brands on the Internet, sets the industry standard for Web site security solutions. VeriSign makes it fast, efficient, and cost-effective for members of its Secure Site ISP Program to integrate complete solutions, including Secure Sockets Layer (SSL) Certificates and payment services, into their Web hosting services. So to give your Web site customers and their e-commerce consumers the confidence they need to do business on the Internet, offer them a name they can trust: VeriSign.

+ SSL Certificates

VeriSign offers ISP and Web hosting partners the opportunity to easily and cost-effectively provide customers with two tiers of SSL protection: standard SSL Certificates for sites with low security needs and true 128-bit server-gated-cryptography (SGC)-enabled SSL Certificates for e-commerce sites or those that collect highly confidential data such as financial or personally identifiable information. SGC-enabled certificates offer 128-bit SSL encryption—the world's strongest—to over 99999 percent of site visitors. VeriSign¹ is the only Certificate Authority offering true 128-bit SSL Certificates for resale by Internet service provider (ISP) and Web hosting partners.

Each SSL Certificate includes NetSure[®] warranty protection (up to \$250,000 for premium SSL Certificates) to guard against fraud and misuse. Each SSL Certificate also comes with the VeriSign Secured[™] Seal, the most trusted security mark on the Internet². The VeriSign Secured Seal helps assure site visitors that their credit cards and other confidential information are secure, and that leads to more transactions and less abandonment on your Web site.

+ Payment-Processing Solutions

The VeriSign[®] Secure Site ISP program enables you to help your Web business customers accept credit cards and other forms of payment online. Secure, reliable, and affordable, VeriSign[®] Payflow[®] credit card, debit card, purchase card, and electronic check processing services place VeriSign at the center of Web transaction automation. VeriSign works closely with you to seamlessly integrate powerful Internet payment transaction services with your other service offerings. Choose VeriSign[®] Payflow Link[®], our easy-to-use solution, or VeriSign[®] Payflow Pro[®], our most robust and versatile solution for busy e-commerce sites. All Payflow services come with the VeriSign Secured Seal to let site visitors know this site uses the VeriSign payment infrastructure to protect transactions.

¹ Including VeriSign affiliates and subsidiaries.

Where it all comes together.™

DATA SHEET

VeriSign Secured™ Seal

Be sure to post the VeriSign Secured Seal on your home page or other pages where confidential information exchange takes place. The VeriSign Secured Seal lets your site visitors know that you have chosen leading services to help protect them.

+ ISP E-Commerce Site Solutions—and More

VeriSign also offers Secure Site ISP Program partners complete security solutions that include both SSL Certificates (either standard-strength certificates or true 128-bit certificates with SGC) and the Payflow Pro payment service, ready to integrate into your existing service packages. Additional VeriSign value-added services are available to add to your bottom line, including email certificates, volume solutions for managing multiple SSL Certificates, firewall traffic management, training, comprehensive email security, and anti-phishing services.

The Secure Site ISP Center is your online base for easily managing your VeriSign partner account. Here, you'll find product information and highlights, the Marketing Resource Center, a link to your dedicated Account Manager, program updates, news, and more.
